What's Inside

- PSCR Factor Reduced for 2015
- Spring Storm Preparation
- Home Heating Credit
- Energy Theft
- Portable Generator Safety

March 2015

PSCR FACTOR REDUCED

In last November's *Spotlight*, members were notified of an adjustment to the Power Supply Cost Recovery (PSCR) factor beginning with February bills. In 2014 the PSCR factor was \$0.00106 per kWh. For 2015, the factor has changed to a **credit** of \$0.00031 per kWh. The PIE&G board approved the new factor on October 29, 2014 in anticipation of decreased wholesale energy costs. The decreased PSCR factor will be reflected on bills rendered on or after February 1, 2015.

The purpose of the PSCR factor is to allow a utility to collect only what is needed each year to cover its power supply costs.

Most other electric utilities in Michigan have a PSCR factor on their electric bills.

SCHOLARSHIP DEADLINE

The deadline for the PIE&G Communities First Fund scholarships is **March 31, 2015.**

BE PREPARED FOR SPRING STORMS

Lightning from thunderstorms kills more people each year than tornadoes or hurricanes, according to the American Red Cross. As spring arrives, make sure you're prepared to handle storms that come with the changing season. Follow these tips from the Red Cross to stay safe.

Stay away from down power lines. Electricity could still be flowing through them. Report them immediately to PIE&G at (800) 423-6634.

Hear thunder? Head inside. If you can hear it, you could be in danger from lightning. The National Weather Service recommends you stay indoors at least 30 minutes after the last clap of thunder. If you're outside and can't seek shelter indoors, avoid high ground, water, tall isolated trees, and metal objects like bleachers or fences.

Unplug your electronics. Avoid using electrical items and telephones, which can carry power surges. Keep a battery-powered TV or radio on hand for weather updates.

Delay outdoor activities. If conditions are right for a thunderstorm, postpone the baseball game and stay inside—it doesn't have to be raining for lightning to strike.

Assemble an emergency preparedness kit with:

- Water: one gallon per person, per day
- Non-perishable food
- Flashlight
- Battery-powered or hand-crank radio (preferably NOAA weather radio) & extra batteries
- First-aid kit
- Seven-day medicine supply
- Copies of personal documents
- Cell phone with charger
- Emergency contact information
- Cash

HOME HEATING CREDITS

PIE&G accepts 'Energy Drafts' issued to members eligible for a Home Heating Credit if it is used to pay a *home heating bill* and the name on the energy draft matches the name on the account. Both parties must sign to endorse payment if the draft is issued in two names.

Visit www.michigan.gov/heatingassistance and click on Home Heating Credit for more information.

ENERGY THEFT IS ILLEGAL & DANGEROUS!

Unauthorized utility connections and meter tampering is the most dangerous kind of energy theft that can cause serious safety risks resulting in fires, explosions, electrocution injuries or even death. These illegal and hazardous connections endanger everyone – the person making the illegal connection and anyone nearby, but also utility workers and surrounding property.

Michigan legislation aims to deter unauthorized use or connections of electric and natural gas while protecting consumers from increased utility costs related to energy theft. It is a crime for any person to sell or transfer electricity or natural gas to another person, knowing or having reason to know that the product or service was obtained unlawfully.

Additionally, the legislation sets penalties for the assault or interference with a utility worker or contractor performing his or her duties. The offenses range from a misdemeanor to a felony punishable by imprisonment for up to 10 years and a \$10,000 fine for a worker's death.

PIE&G will take immediate action to shut off service where unsafe and unauthorized use of electric or natural gas service is found. Reconnection will be on hold until all costs are paid, and the co-op may pursue criminal prosecution against the tenant or property owner where the energy theft occurred.

PORTABLE GENERATORS

Please Do Not Put Someone's Life in Danger!

Take special care with portable electric generators, which can provide a good source of power, but if improperly installed or operated, can become deadly. Do not connect generators directly to household wiring. Power from generators can back-feed along power lines and electrocute anyone coming in contact with them, including line workers making repairs. A qualified, licensed electrician should install your generator to ensure that it meets local electrical codes.

Other tips include:

- Make sure your generator is properly grounded.
- Keep the generator dry.
- Make sure extension cords used with generators are rated for the load, and are free of cuts, worn insulation, and have three-pronged plugs.
- Do not overload the generator.
- Do not operate the generator in enclosed or partially enclosed spaces. Generators can produce high levels of carbon monoxide very quickly, which can be deadly.
- Use a ground fault circuit interrupter (GFCI) to help prevent electrocutions and electrical shock injuries. Portable GFCIs require no tools to install and are available at prices ranging from \$12 to \$30.

EASTER HOLIDAY HOURS

PIE&G will be closed April 3rd in observance of Good Friday. Offices will be open for business on Monday, April 6th.

Presque Isle Electric & Gas Co-op

19831 M-68 Hwy • P.O. Box 308 • Onaway, MI 49765 • 989-733-8515 • 800-423-6634 • www.pieg.com

GAS EMERGENCY ONLY 1-800-655-8565

We will gladly accept your Visa, MasterCard, Discover or American Express. No additional charge for using your credit card.

Most natural gas rates and charges are not regulated by the Michigan Public Service Commission. TWN, long distance phone service is not regulated by the Michigan Public Service Commission.
